

Capra fresca Valcuvia

Source

- Lombardia

Type of milk

- Goat

An acidic fermented goat's cheese produced, therefore, with animal rennet without allowing for the natural acidification of the milk and draining off the liquid. It is typically produced in the alpine and pre-alpine areas lying between Piedmont and Lombardy. This method does not require the consistent removal of the serum and, as a consequence, the product must be consumed quickly.

There is also an aromatised version where herbs and spices are used and one where the cheese is dried and ripened using vegetable carbon.
